

SERVICE OFFERINGS

Your mission is IT. Our mission is you.

We optimize the most important system in your agency—your IT organization.

We help you manage the technology you develop. Better.

Comply

Show your value to oversight organizations. From improving FISMA scores to meeting FITARA reporting needs, MPS gets the process under control, provides your team with the information needed to report, and pinpoints what must be improved to get the scores higher.

Govern

Know that the right things are happening, so your team can focus on their real work. MPS removes old processes, builds new information flows to give your team transparency on what is happening with program requirements, the IT Portfolio, and the contractors who are delivering for you.

Execute

Help your managers do the more valuable work as we draft the policies, processes and procedures that structure IT management interaction with your portfolio. We build your program, communication, and change management approaches and processes, reducing your team's stress and building resilience throughout your organization.

Develop

At the application/project level, MPS engages the people aspects of the SDLC. From eliciting good business and functional requirements for your IT development teams to training and change management, we will improve your user adoption.

Secure

Your assets must be secure, and you have to be able to prove it. MPS builds the processes and manages the documentation that enables your team to know all necessary security measures are activated and to show the progress you have made.
